Functie als Ventilation Practitioner

- Micro, meso, macro
- Intentie/ambitie

Amsterdam UMC

- AMC en VUmc
- ~38.000 opnames
- ~19.500 medewerkers

AMC

- Academisch ziekenhuis (Level 3 Traumacentrum)
- Universiteit van Amsterdam (UvA)
- 1100 bedden

Amsterdam UMC locatie 'AMC'

Intensive Care AMC

- 50 beademingsbedden
 - Cardiopulmonale chirurgie
 - Neurochirurgie
 - VA/VV-ECMO

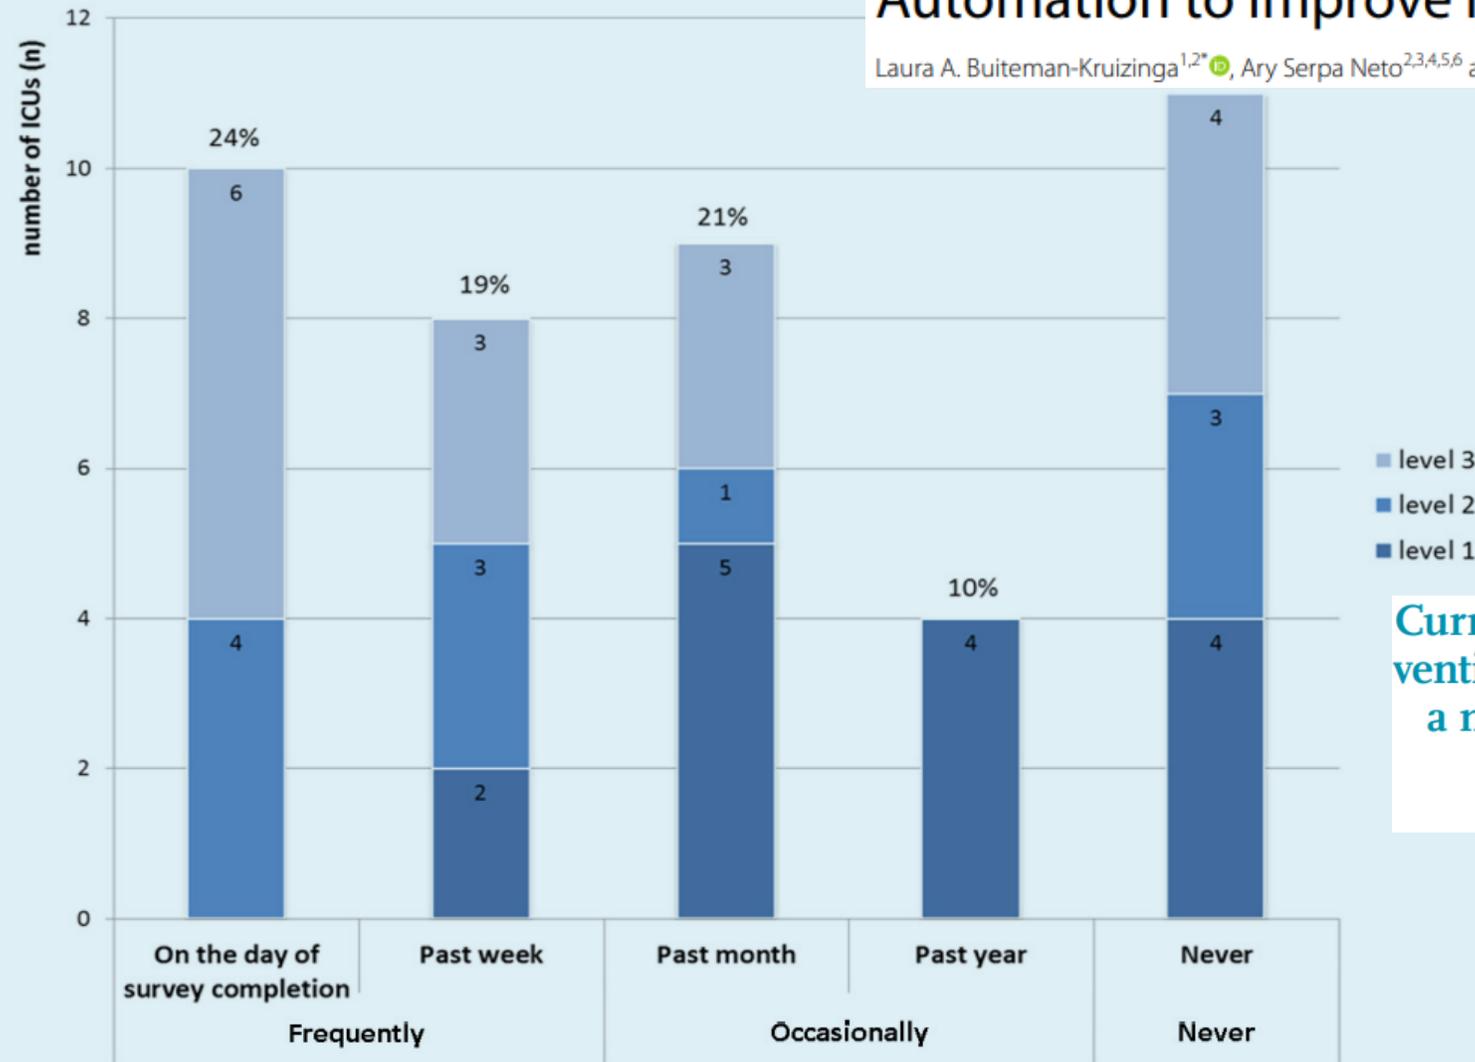

Personele bezetting

- Intensivisten 19 FTE
- Fellows 5 FTE
- AIOS/ANIOS 20 FTE
- IC-verpleegkundigen 112 FTE
- IC-Practitioners 5 FTE
- MC-verpleegkundigen 18 FTE

	2022	07-2023
IC opnames	2349	1083
Opname dagen	10437	4460
Beademingsdagen	7354	3126

Automation to improve lung protection

Laura A. Buiteman-Kruizinga^{1,2*}, Ary Serpa Neto^{2,3,4,5,6} and Marcus J. Schultz^{2,7,8,9}

Current practice of closed-loop mechanical ventilation modes on intensive care units – a nationwide survey in the Netherlands

E.F.E. Wenstedt^{1*}, A.J.R. De Bie Dekker¹, A.N. Roos¹, J.J.M. Verberne¹, H.H.M. Korsten¹, M.J. Schultz^{2,3}, A.J.G.H. Bindels¹

monitors V_T , RR, and $etCO_2$
reduction of PS and performs SBT

1992

PAV+

monitors flow and volume
assist in proportion to patient's effort

1998

ASV

automated selection of V_T and RR
according to the least WOB (Otis)

2002

NAVA

2011

INTELLiVENT-ASV

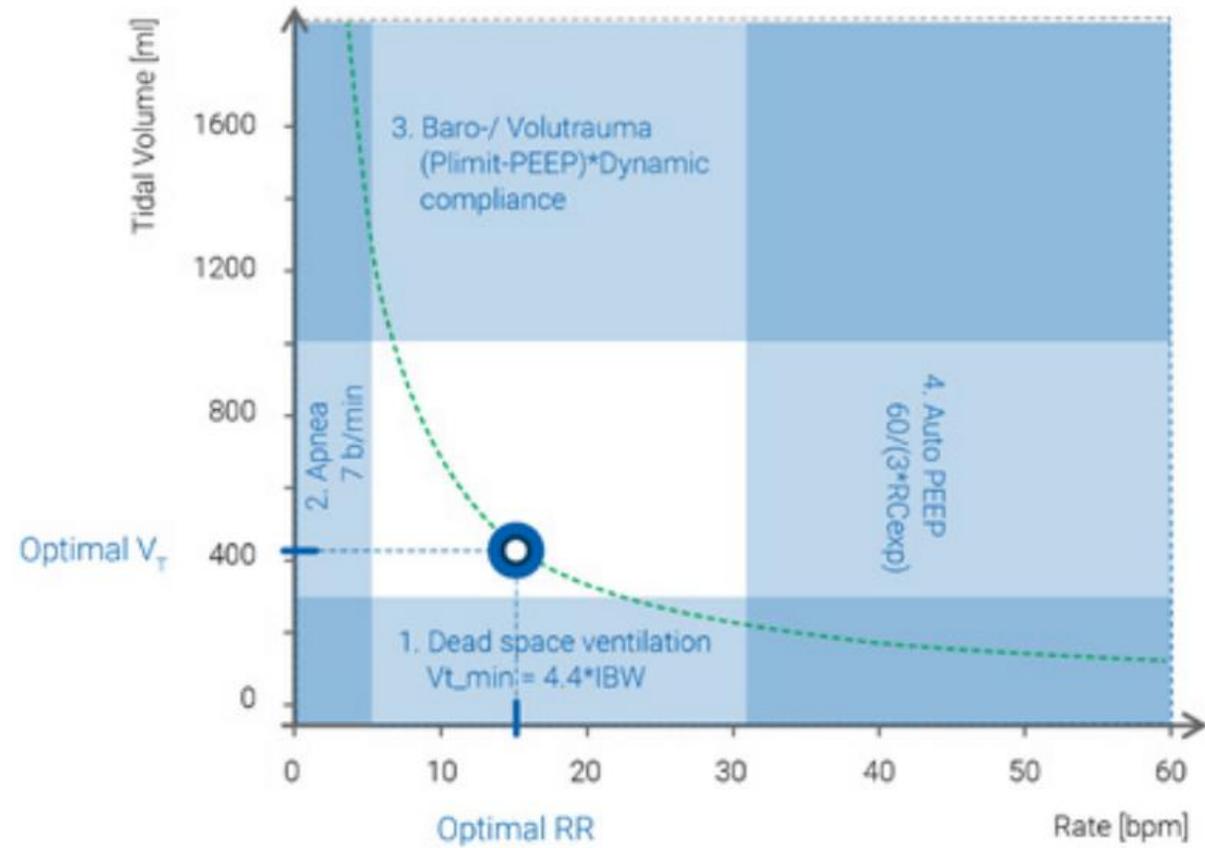

automated selection of V_T and RR
the least WOB (Otis) and FOB (Mead)
monitors V_T , RR, $etCO_2$ and SpO_2
automated titrations of AMV, PEEP and FiO_2
reduction of AMV via reduction of PS, performs SBT

The last time a closed-loop ventilation mode was used on the different levels of ICUs with access to a closed-loop ventilation mode (n = 42). The use was classified as frequently, occasionally or never if respondents with a closed-loop ventilation mode had applied this mode at least once in the preceding week, month to year, or never, respectively.

INTELLiVENT-ASV

- Laagste WOB o.b.v Otis en Meade
- 2 externe sensoren
- 3 controllers
 - %MinVol
 - PEEP
 - FiO_2

Aanleiding

- Outcome
 - Botta et al 2021

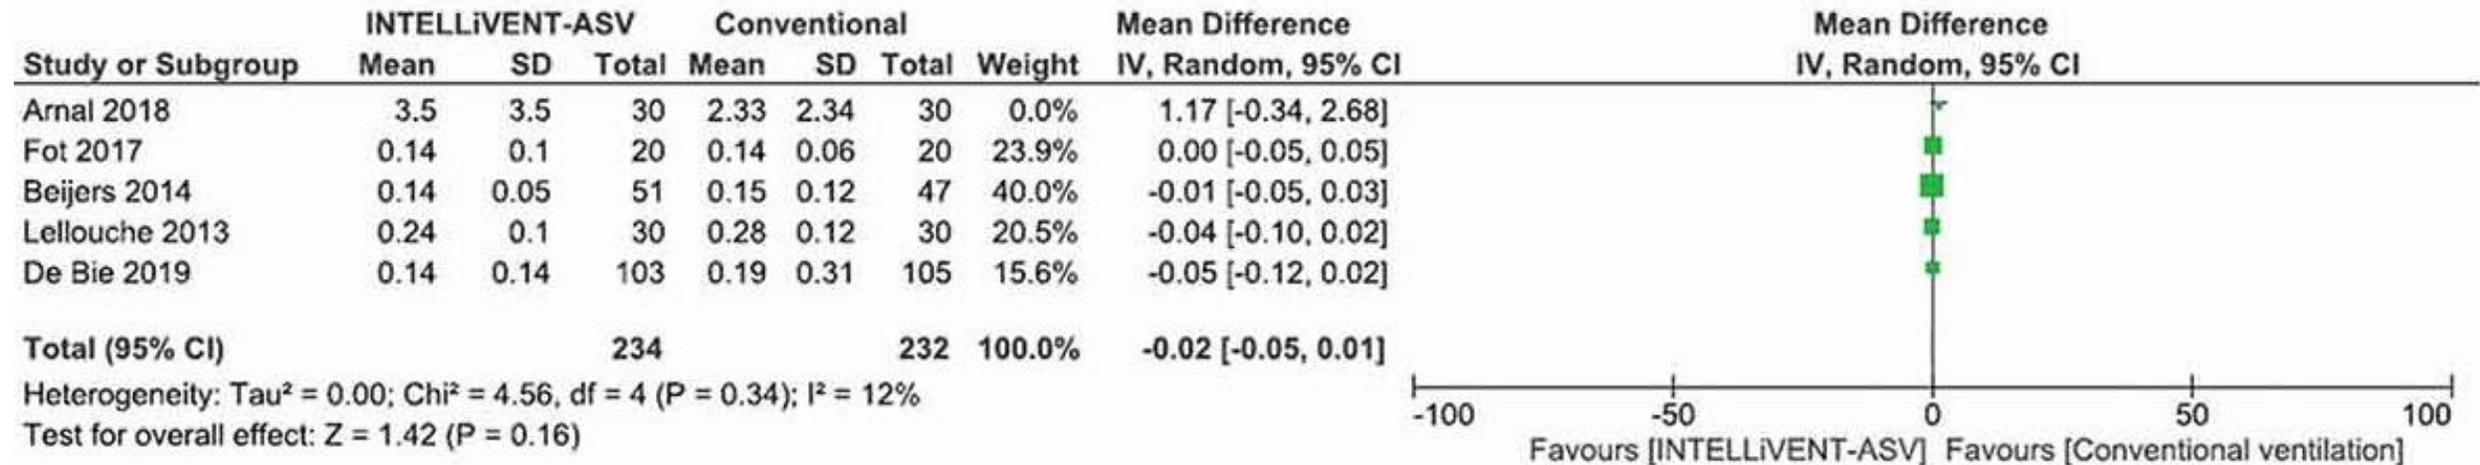

STUDY PROTOCOL

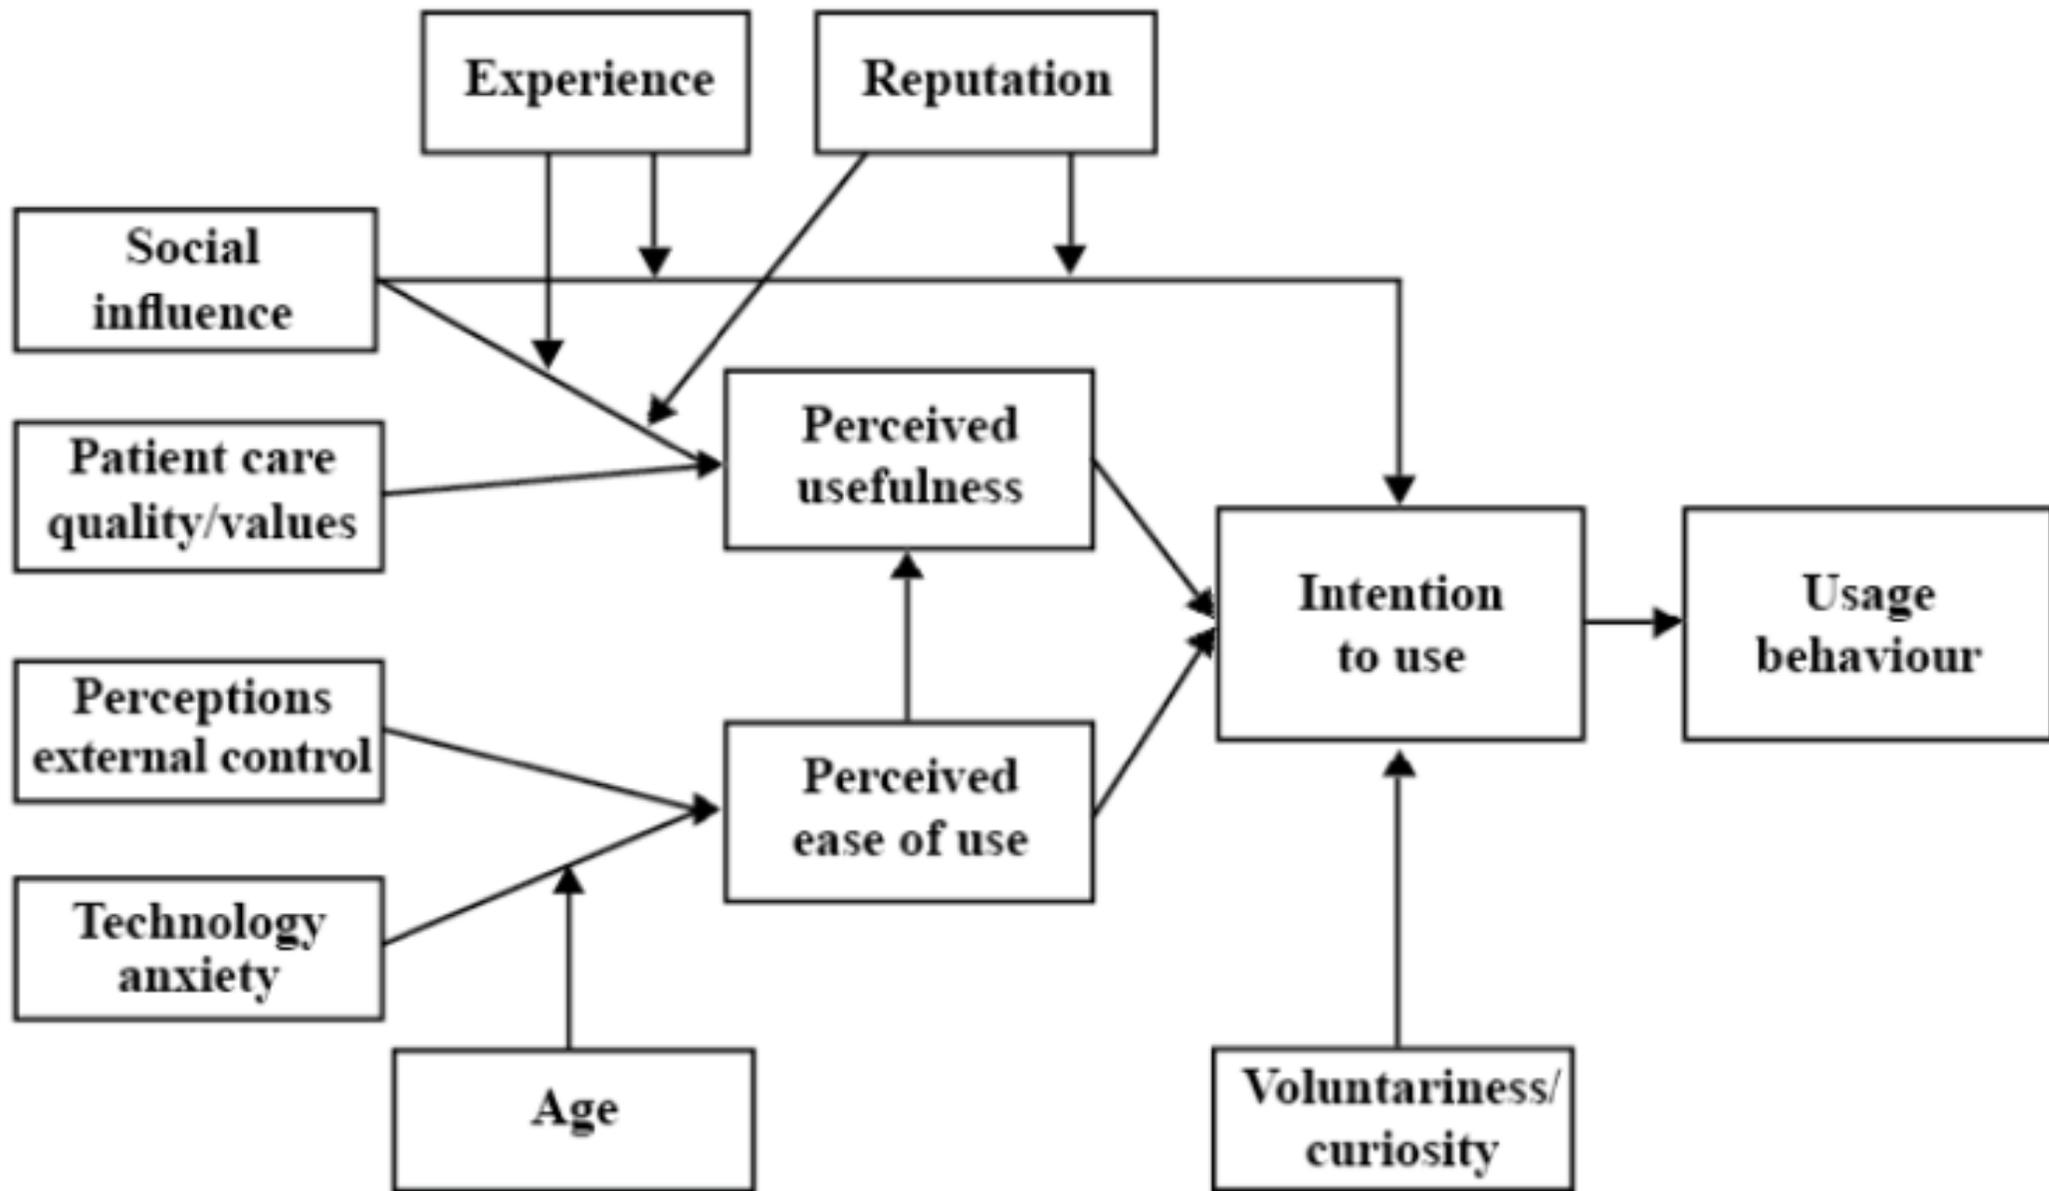

Open Access

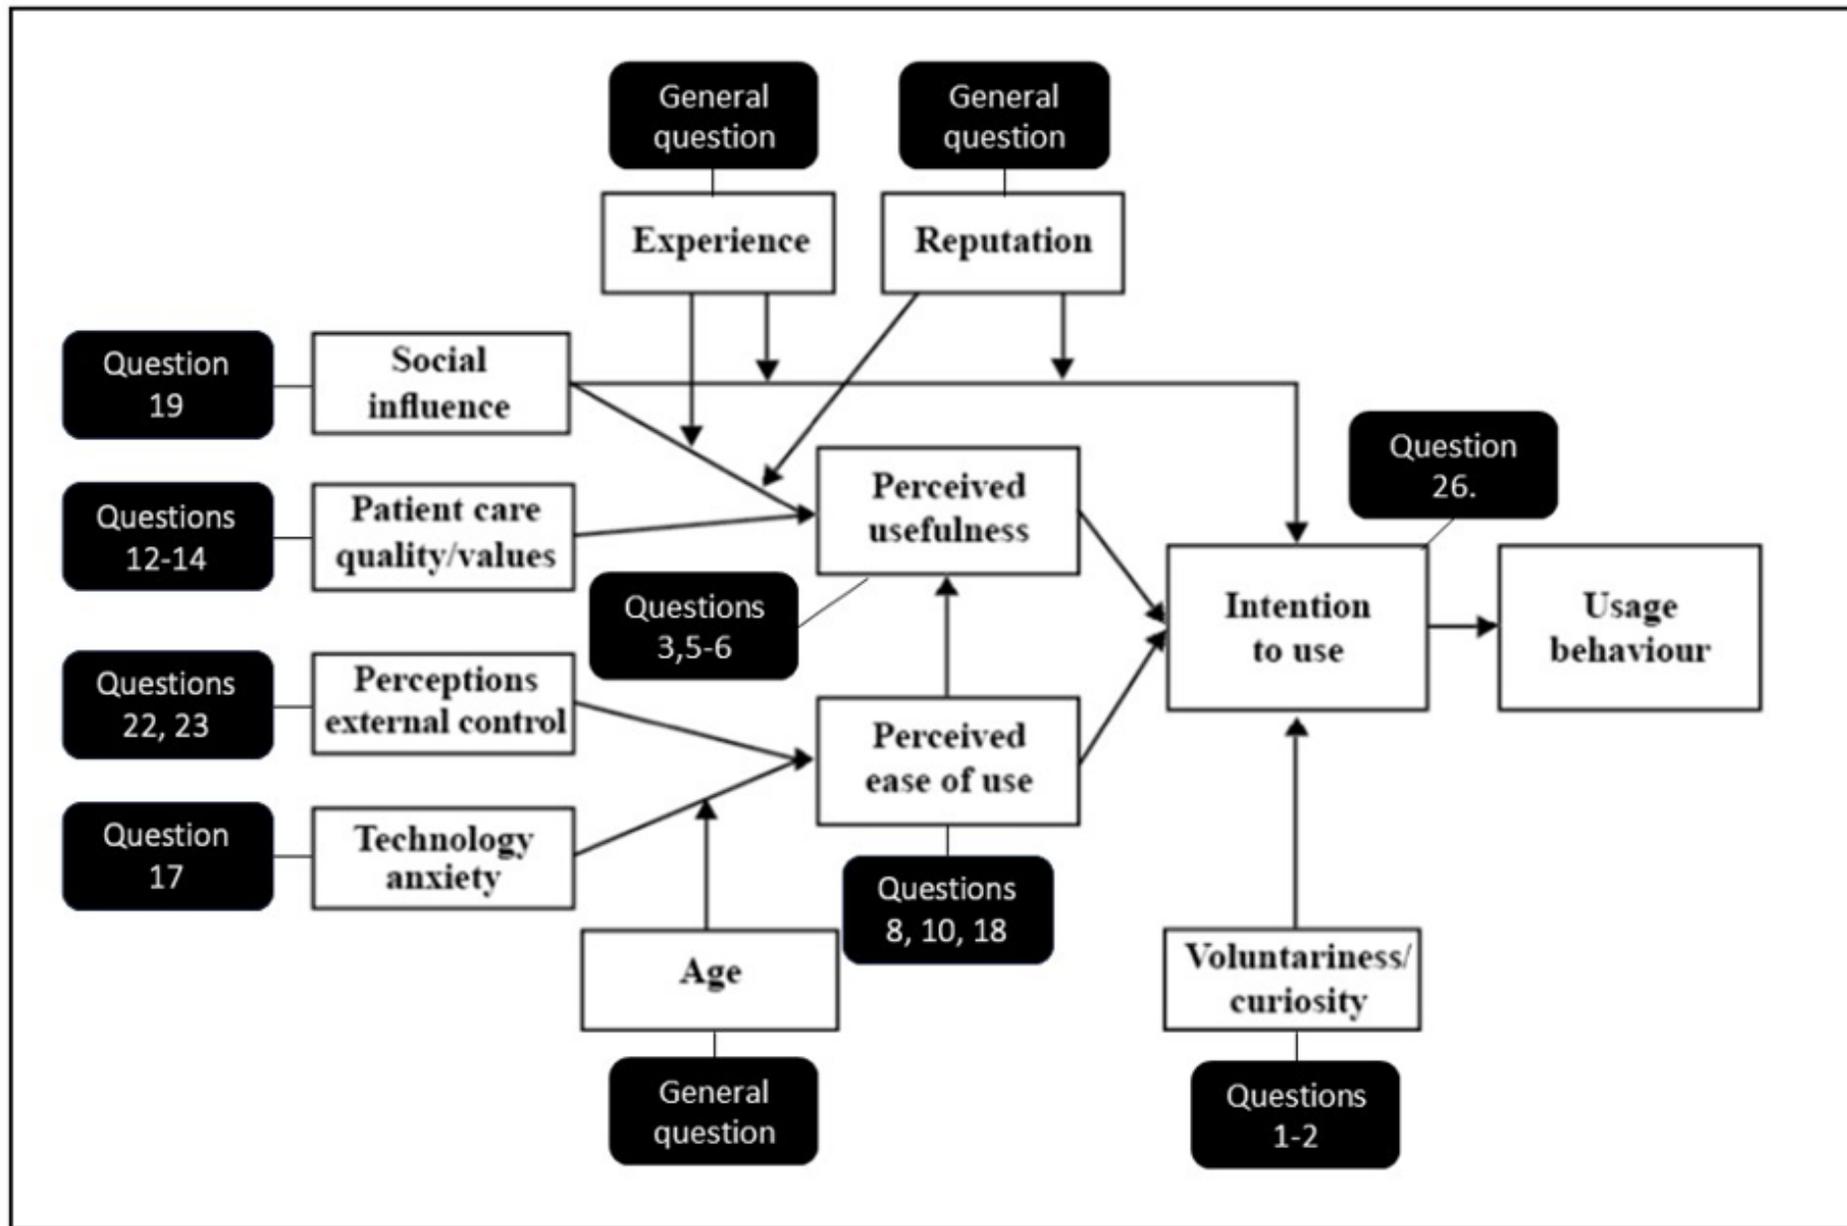

Effect of Automated Closed-loop ventilation versus conventional VEntilation on duration and quality of ventilation in critically ill

Forest plot of duration of weaning

Vraagstelling

- Gebruikersscore en SUS onder IC-verpleegkundigen
- Inzicht in barrières t.a.v. iASV en conventionele beademing

Hypothese

- Gebruikersscore en SUS is hoger bij iASV beademing

Methodiek

Convenience sampling tussen 01-05-2023 en 31-06-2023

- Gebruik ACTiVE inclusie

Infomeren team via nieuwsbrief en klinische lessen

Vragenlijst

- Poster met QR-code
- Opdracht in PDMS

Interviews

ONDERZOEK

INTELLIVENT-ASV
Versus
Conventioneel

Help mee door vragenlijst in te vullen!!

Dit onderzoek vergelijkt gebruiksvriendelijkheid van INTELLIVENT-ASV versus conventionele beademing.
Hoe help je??
Je hoeft alleen de vragenlijst in te vullen, kost maximaal 5 minuten!!!

SCAN MIJ!!!

Conventionele beademing IASV beademing

Vragen?? Mail t.d.vanleijssen@amsterdamumc.nl

Methodiek

Vraag 7, 11, 15, 20 en 21

- Likert-schaal score - 1

Vraag 4, 9, 16, 24 en 25

- 5 - Likert-schaal score

Totaal X 2,5

$$\text{SUS totaal} = ((\text{vraag } 7 - 1) + (\text{vraag } 11 - 1) + (\text{vraag } 15 - 1) + (\text{vraag } 15 - 1) + (\text{vraag } 20 - 1) + (\text{vraag } 21 - 1) + (5 - \text{vraag } 4) + (5 - \text{vraag } 9) + (5 - \text{vraag } 16) + (5 - \text{vraag } 24) + (5 - \text{vraag } 25)) * 2,5$$

Subanalyse

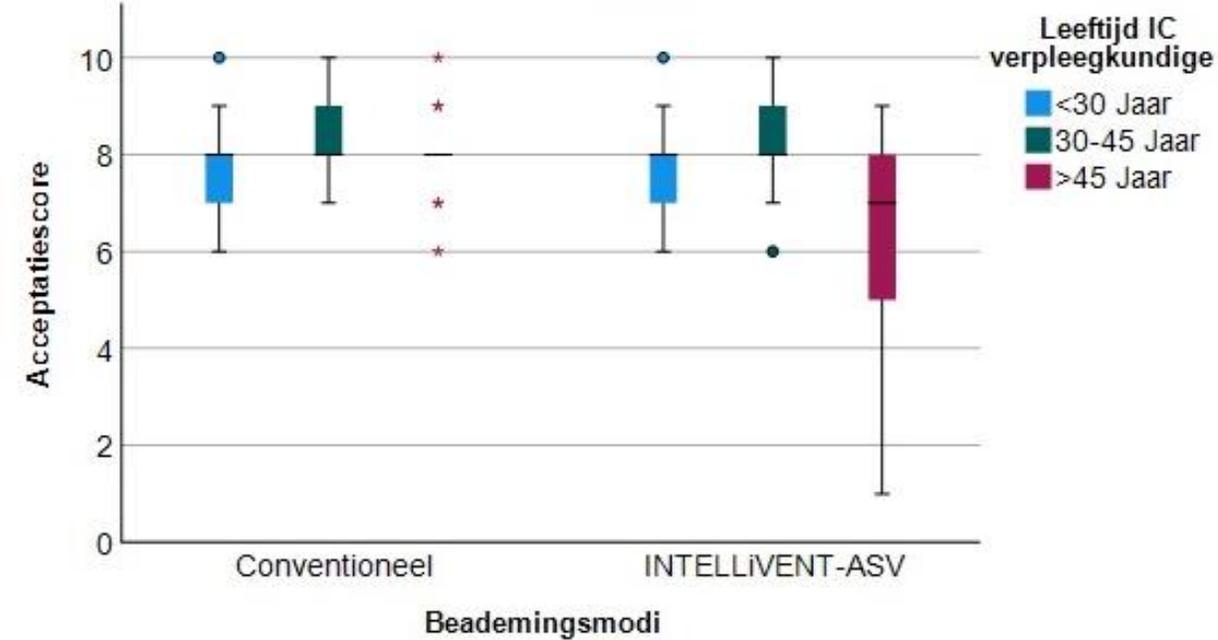

Boxplot acceptatiescore

IC werkervaring

Boxplot acceptatiescore

Leeftijd

Interviews

iASV

Nadelen

- Afhankelijkheid sensoren
- Extra training en kennis
- Overmatige alarmen

Conventioneel

Nadelen

- Handmatige aanpassingen
- Beperkte feedback
- Afhankelijk van verpleegkundige kennis

Discussie

64 patiënten

- iASV versus conventioneel
- Endpoints: handmatige aanpassingen, user acceptance, sedatiebehoefte en beademingsduur

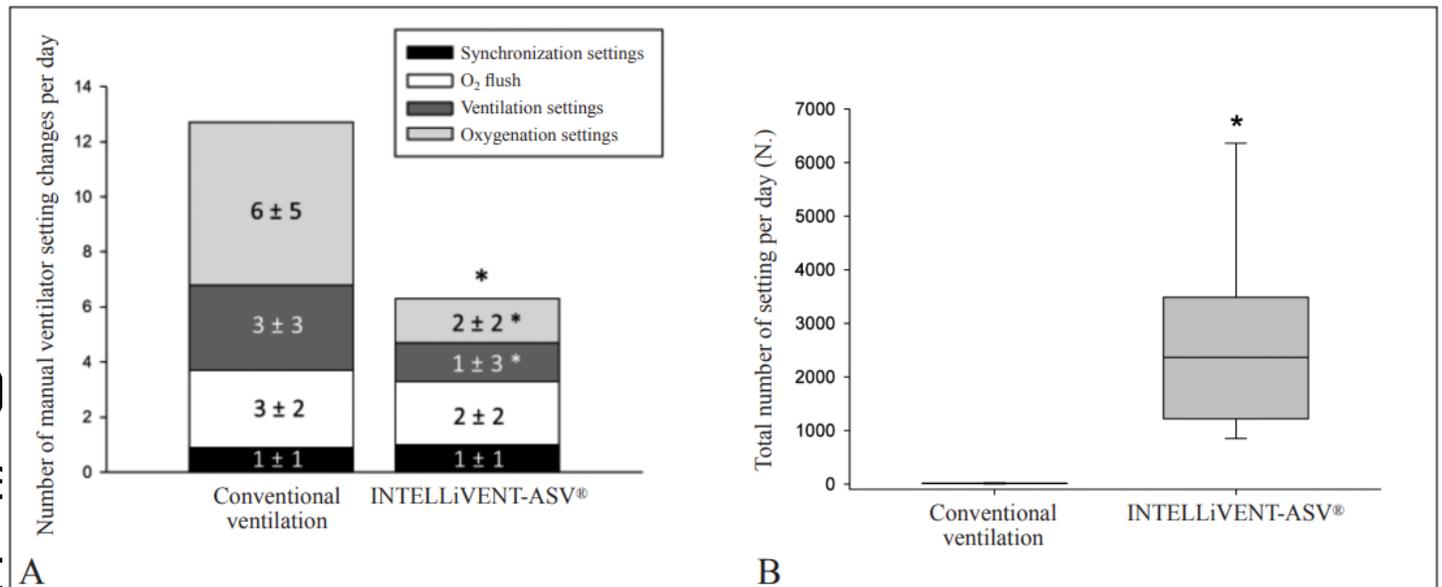

User acceptance score

- Likert schaal (0-10)
- IC-verpleegkundigen: 0 (0-1)
- Intensivisten: 0 (0-1) iASV versus conventioneel
- Ander bevoegdheden IC-verpleegkundigen

Closed loop ventilation mode in Intensive Care Unit: a randomized controlled clinical trial comparing the numbers of manual ventilator setting changes

Jean-Michel ARNAL^{1,2*}, Aude GARNERO¹, Dominik NOVOTNI²,
Gaëlle CORNO¹, Stéphane-Yannis DONATI¹, Didier DEMORY¹, Gabrielle QUINTANA¹,
Laurent DUCROS¹, Thomas LAUBSCHER², Jacques DURAND-GASSELIN¹

Minerva Anesthesiologica 2018 January;84(1):58-67
DOI: 10.23736/S0375-9393.17.11963-2

Discussie

- Non-response bias
 - Selectie bias
 - Recall bias
-
- Start vragenlijst na dienst inclusie
 - Koppeling ventilator en monitor
-
- iASV sinds 3 jaar in opleiding

Conclusie

Hypothese = Gebruikersscore en SUS is hoger bij iASV beademing

- SUS en gebruikersscore statistisch lager bij iASV beademing
- SUS van >68 bij iASV en conventioneel

Aanbevelingen

Verder onderzoek

- Grotere groep patiënten
- Zelfde onderzoek, multicenter
- Verband beademingsvoorwaarde op SUS en gebruikersscore
- Verband spontane ademhaling op SUS en gebruikersscore

Onderzoek reeds gestart in Reinier de Graaf ziekenhuis en Catharina ziekenhuis

Fully automated postoperative ventilation in cardiac surgery patients: a randomised clinical trial

Ashley J. R. De Bie^{1,2,*}, Ary Serpa Neto^{3,4}, David M. van Meenen³, Arthur R. Bouwman¹, Arnout N. Roos¹, Joost R. Lameijer⁵, Erik H. M. Korsten^{1,2}, Marcus J. Schultz^{3,6,7} and Alexander J. G. H. Bindels¹

Zones of ventilation

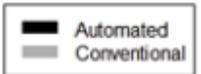

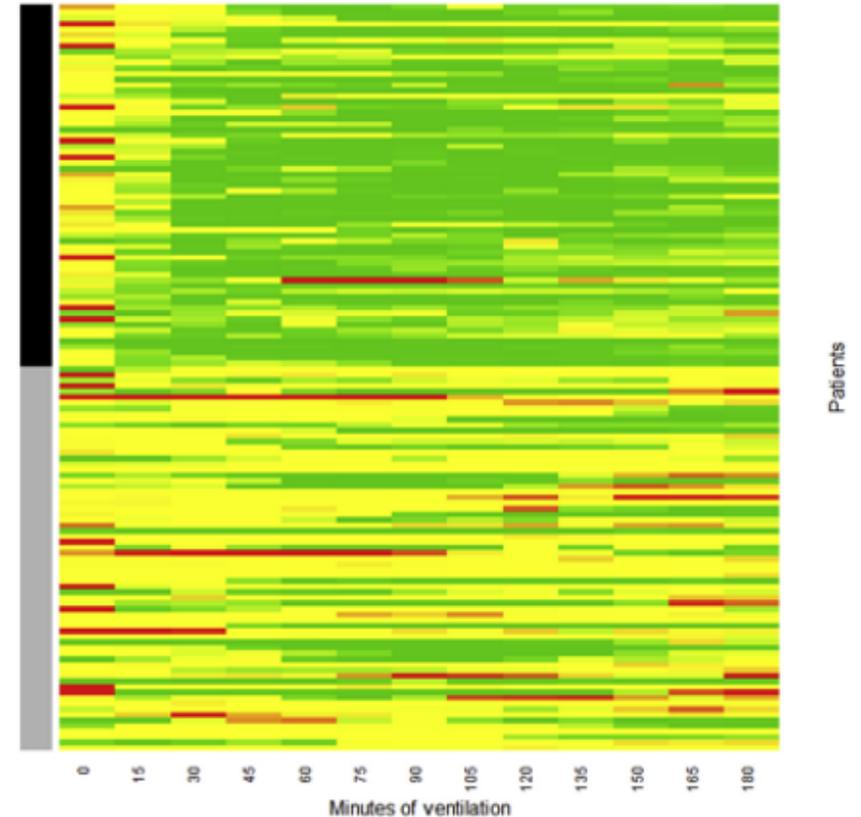

Table 1 Zones of ventilation used to define the primary outcome (adapted from Lellouche and colleagues²³). EtCO₂, end-tidal carbon dioxide; F_{IO}₂, inspired fraction of oxygen; PBW, predicted body weight; SpO₂, oxygen pulse oximetry.

	Optimal zone	Acceptable zone	Critical zone
Tidal volume (ml kg ⁻¹) PBW	≤8	8–12	>12
Maximum airway pressure (cm H ₂ O)	<31	31–36	≥36
EtCO ₂ (kPa)	4.0–6.1	3.3–4.0 or 6.1–6.8	<3.3 or ≥6.8
SpO ₂ (%)	93–98 or ≥93 if F _{IO} ₂ ≤40%	≥98 or 85–93	<85
Definition	If any present: <i>critical zone</i>	If not in the <i>optimal zone</i> and none of the <i>critical zone</i> is present: <i>acceptable zone</i>	All must be present: <i>optimal zone</i>
Missing	If all parameters are missing, <i>zone</i> is missing. If parameters are missing, but one is available and it is in the <i>critical zone</i> , <i>zone</i> is defined as <i>critical</i> . If parameters are missing, but one is available and it is not in the <i>critical zone</i> , <i>zone</i> is defined as <i>missing</i> .		

Otis Formule

Otis' formula

Minimum work of breathing*

$$f \approx \frac{k}{RC_{rs}}$$

f – Rate

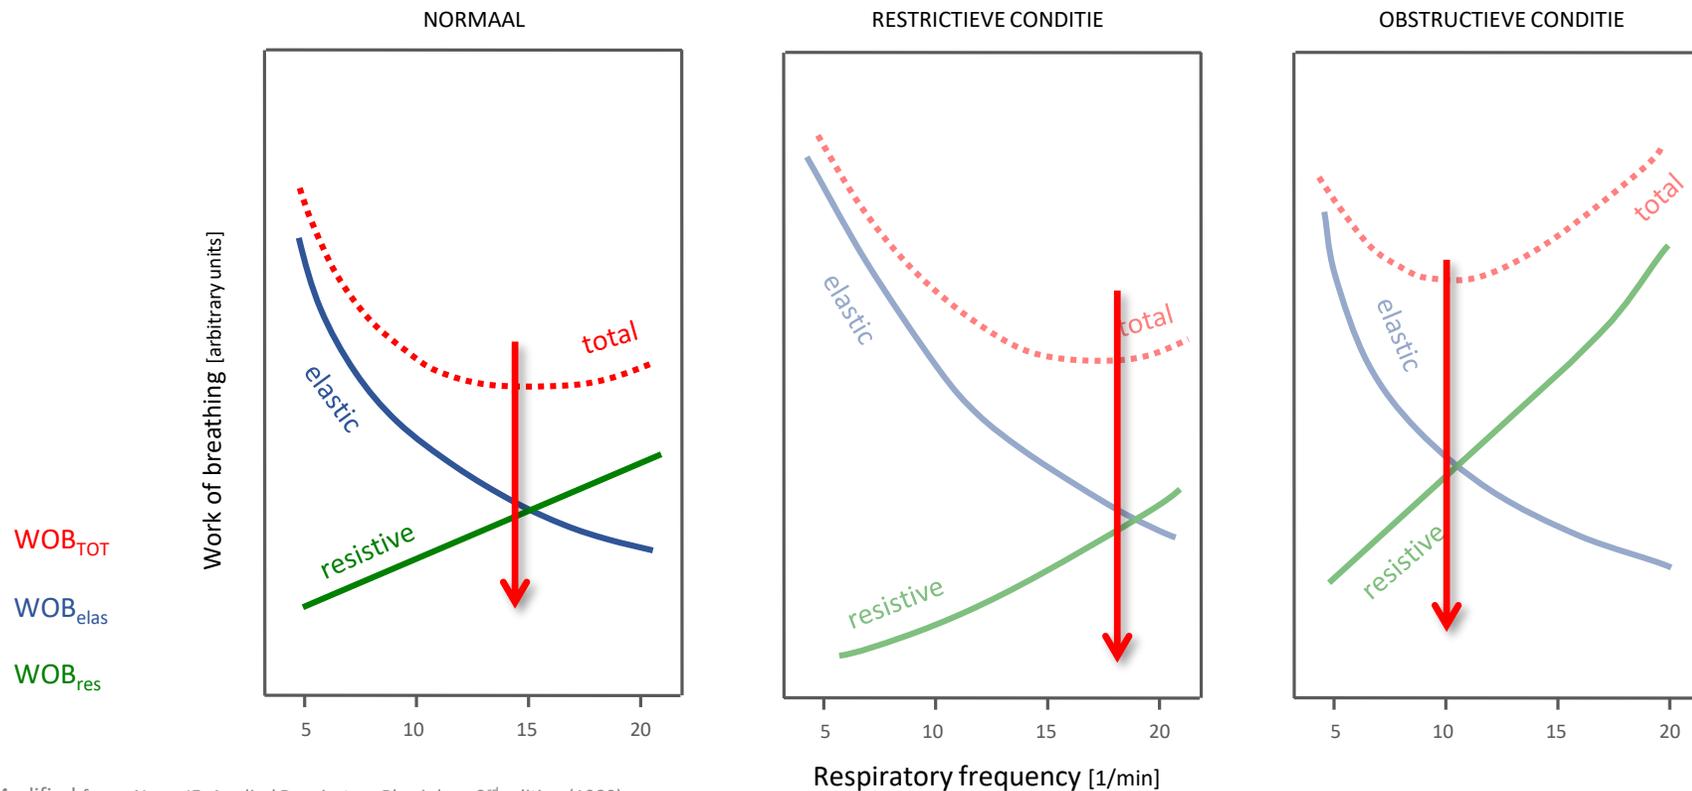

k – Constant

R – Resistance

C_{rs} – Compliance

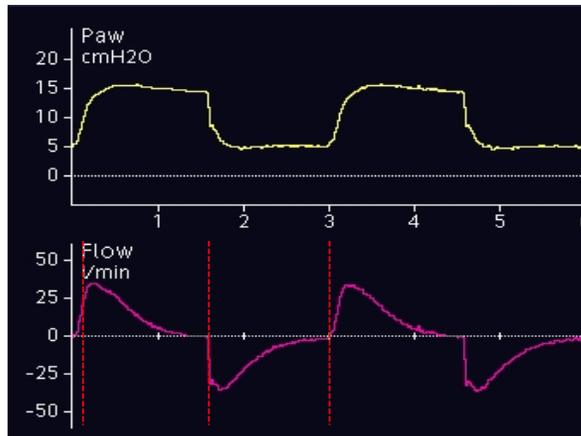

WOB en respiratory-rate afhankelijkheid

RC_{exp}

Korte tijd constante
RC_{exp} < 0.6 sec

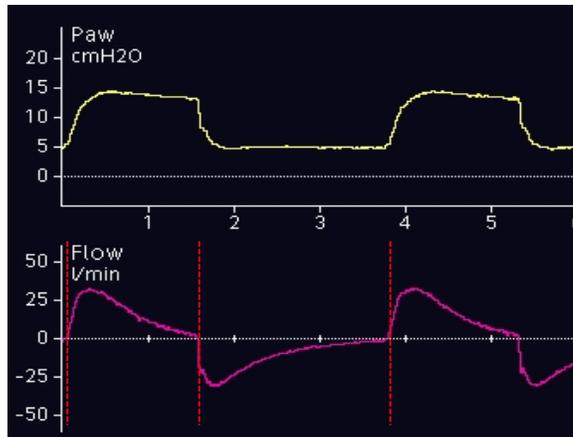

Restrictive disease

Decreased C_{stat}: ARDS, atelectasis,
chest wall stiffness

C_{stat} = 22 ml/cmH₂O

R_{insp} = 10 cmH₂O/l/sec

Normale tijd constante
RC_{exp} 0.6–0.9 sec

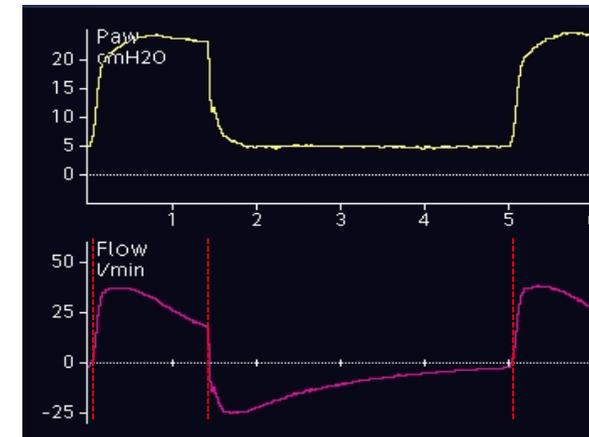

Normal

Normal C_{stat} and R_{insp} or
combination of decreased C_{stat} and
increased R_{exp}

C_{stat} = 60 ml/cmH₂O

R_{insp} = 10 cmH₂O/l/sec

Lange tijd constante
RC_{exp} > 0.9 sec

Obstructive disease

Increased R_{exp}: COPD, asthma, or
bronchospasm, ETT obstruction or
incorrect positioning

C_{stat} = 70 ml/cmH₂O

R_{insp} = 30 cmH₂O/l/sec

Normale tijd constante
RC_{exp} 0.60 sec

Normale long conditie

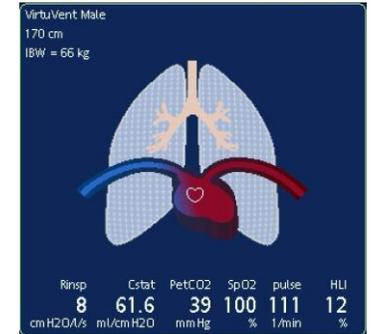

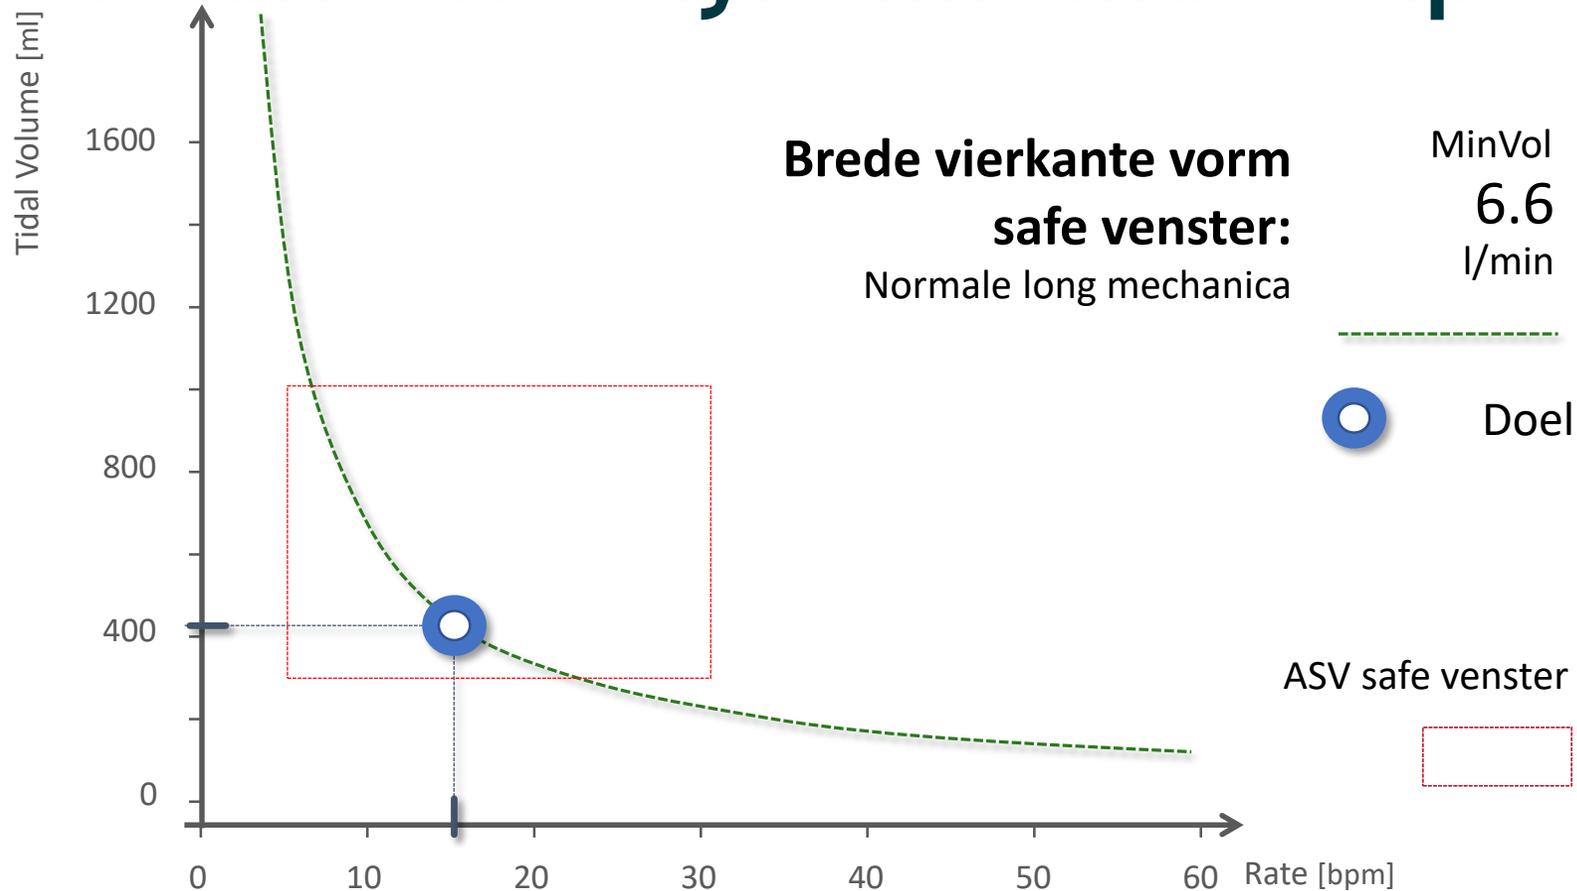

Normale Cstat and Rinsp of combinatie van verminderde Cstat en toegenomen Rinsp.

Cstat = 60.7 ml/cmH2O

Rinsp = 10 cmH2O/l/sec

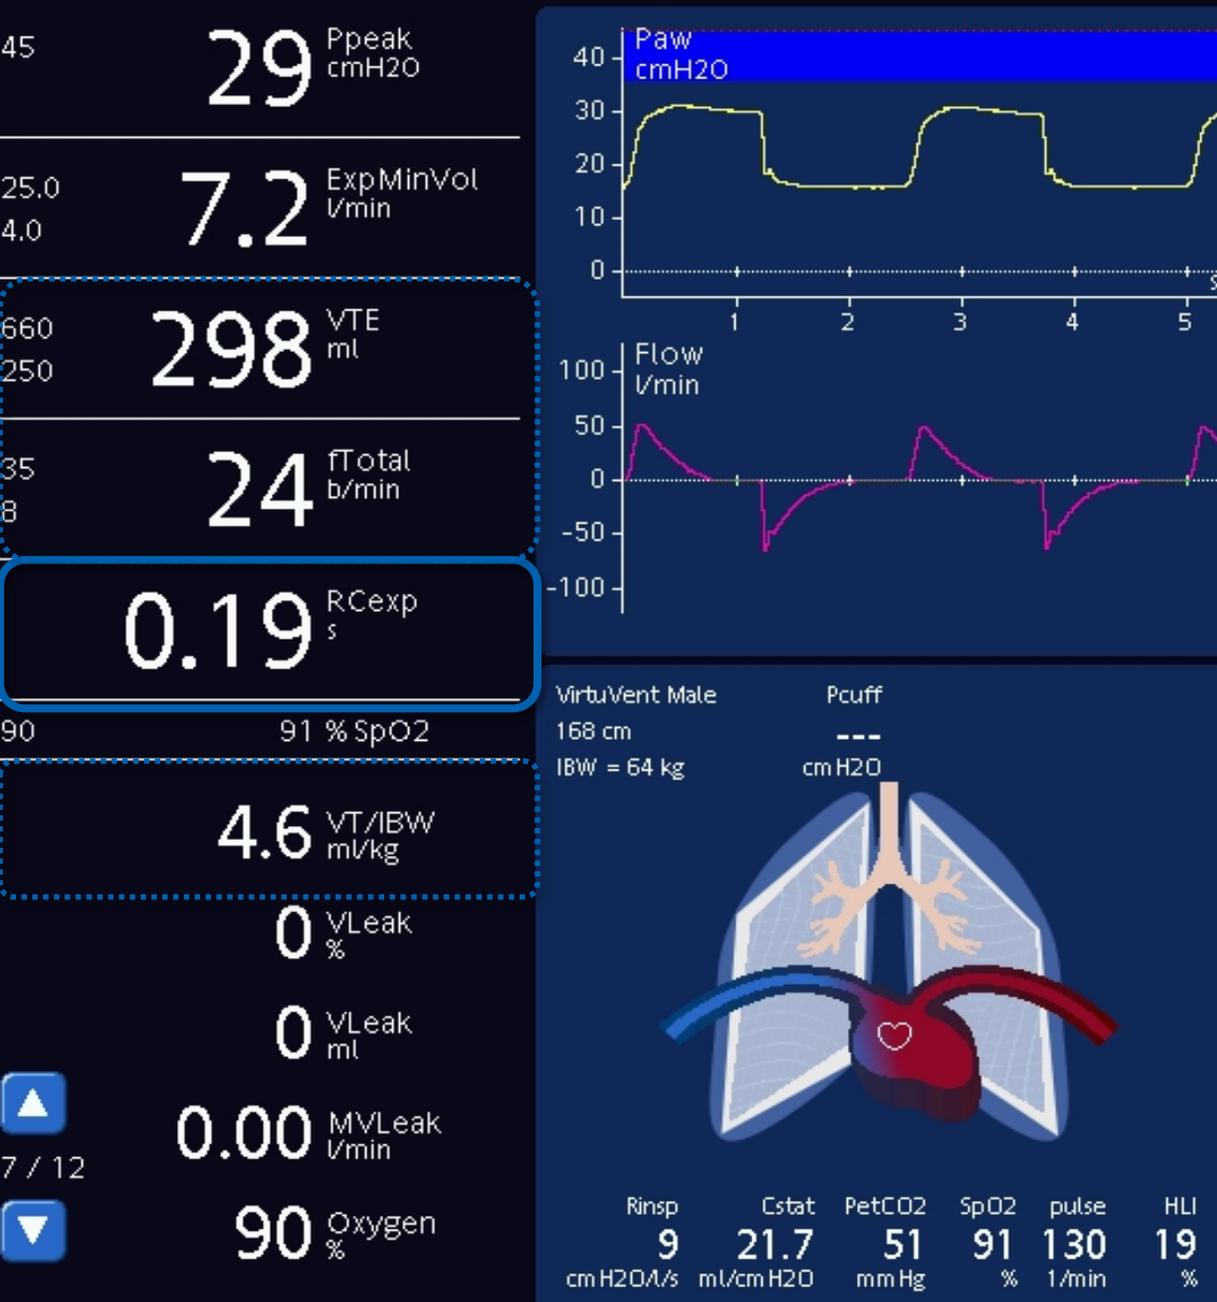

Safe venster - dynamische aanpassing

RCexp: 0.67 s

Cstat: 61.8 ml/cmH2O

Rinsp: 8 cmH2O/l/s

Korte tijd constante
 $RC_{exp} < 0.19 \text{ sec}$

Restrictieve ziekte

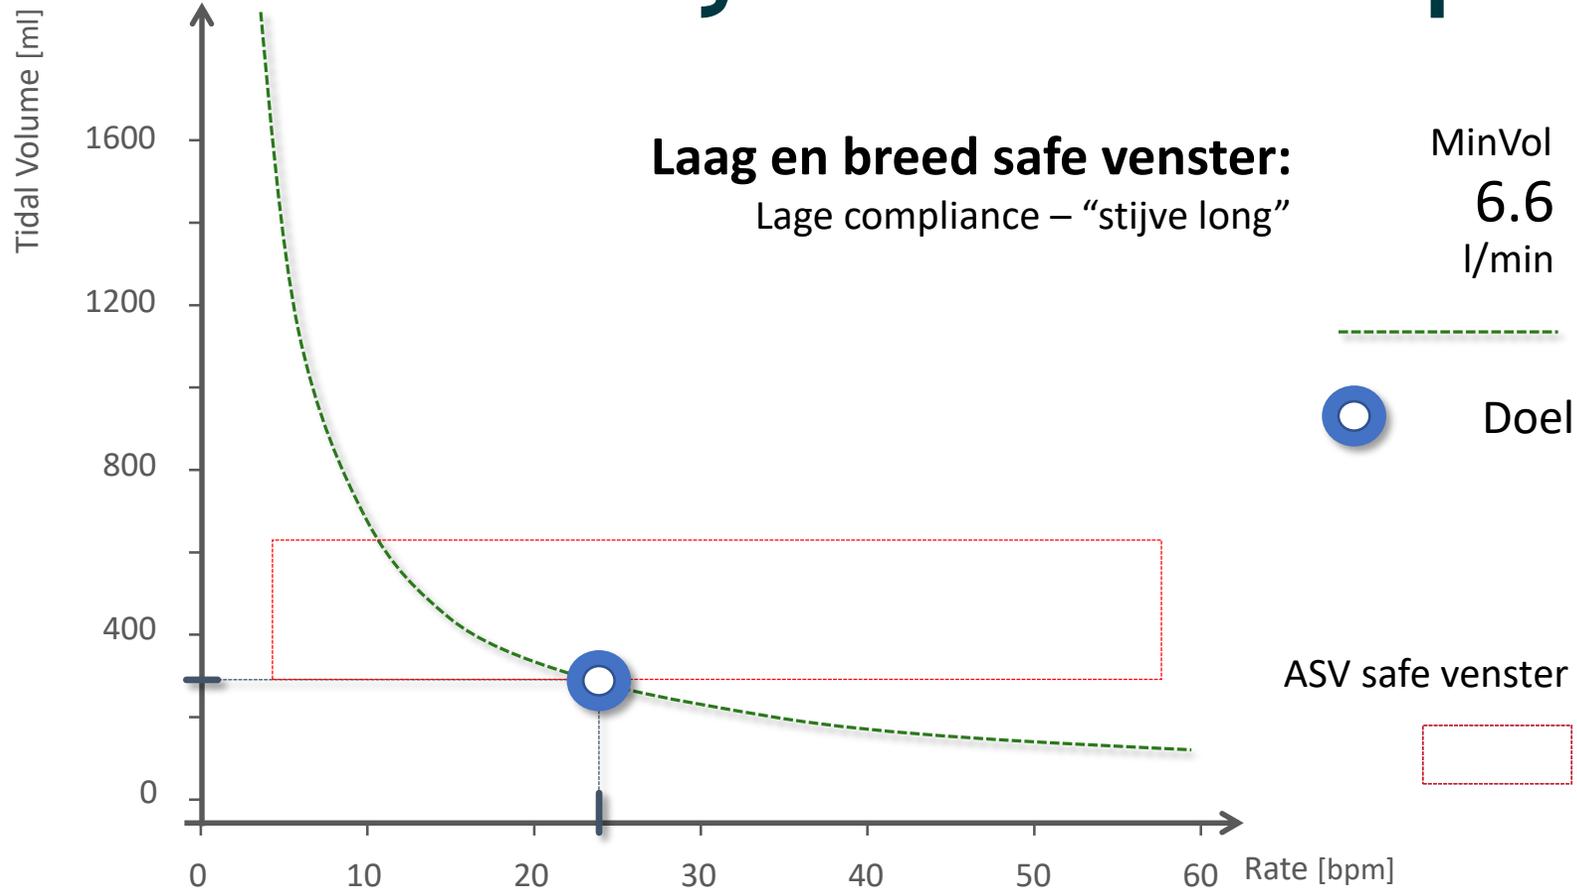

Verlaagde Cstat: ARDS, atelectase, chest wall stiffness

Cstat = 21 ml/cmH2O

Rinsp = 9 cmH2O/l/sec

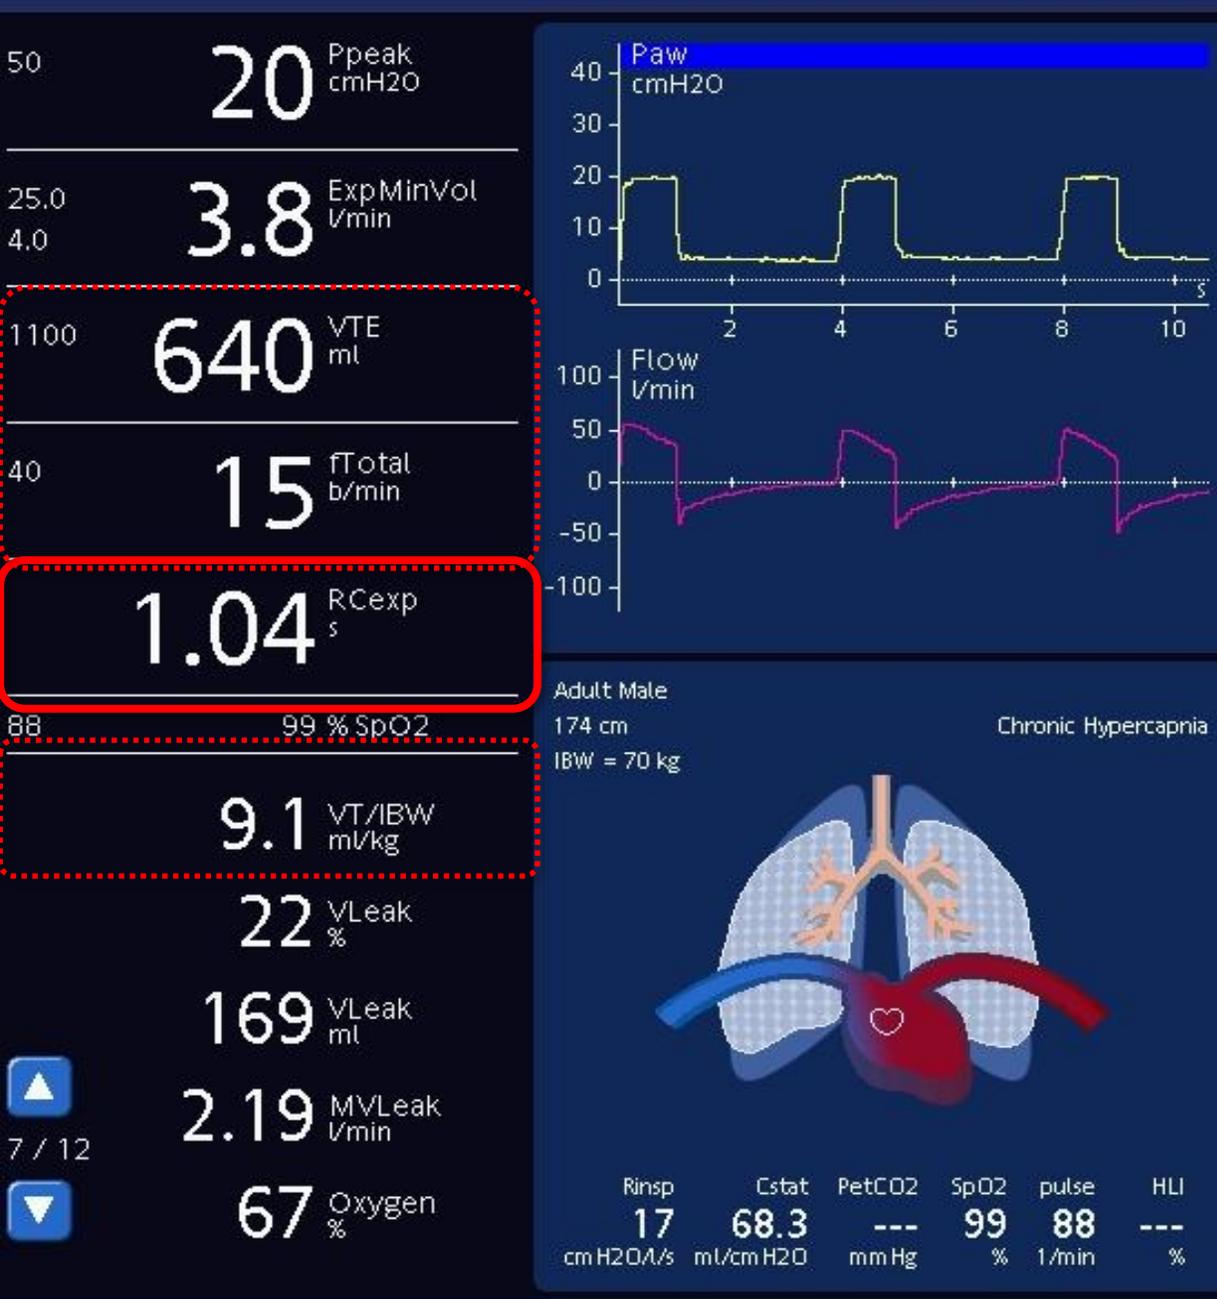

Safe venster - dynamische aanpassing

RCexp: 0.18 s

Cstat: 18 ml/cmH2O

Rinsp: 7 cmH2O/l/s

Lange tijd constante
 RC_{exp} 1.04 sec

Obstructieve long ziekte

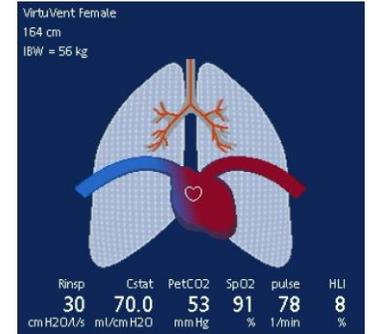

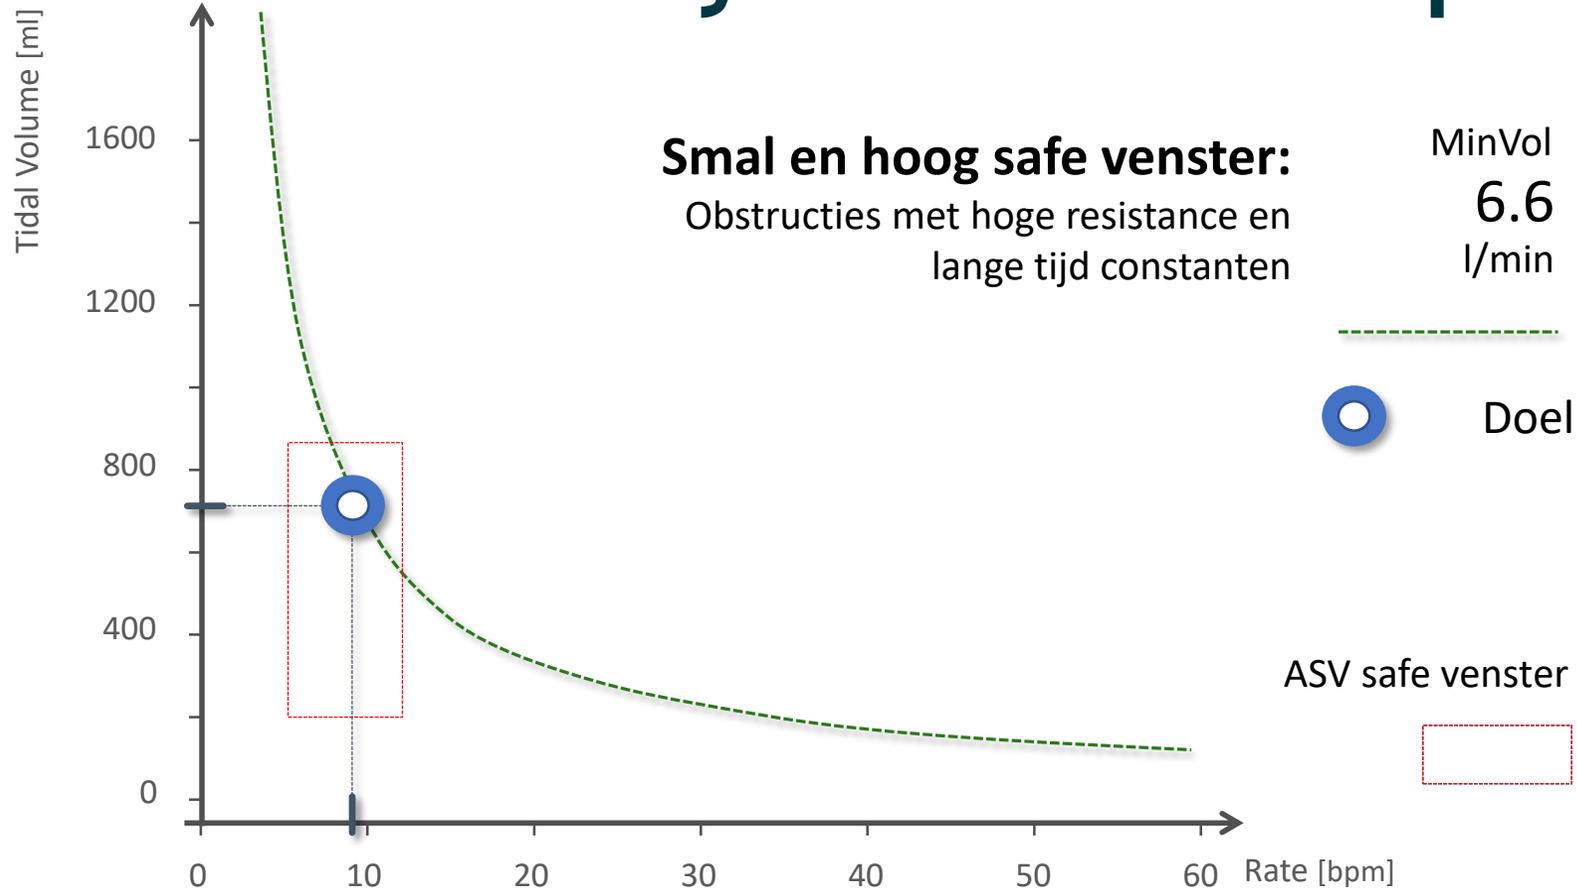

Toegenomen Rinsp: COPD, asthma, of bronchospasme, ETT obstructie of foutieve positionering

Cstat = 68.3 ml/cmH₂O

Rinsp = 17 cmH₂O/l/sec

Safe venster - dynamische aanpassing

RCexp: 2.45 s

Cstat: 70 ml/cmH2O

Rinsp: 30 cmH2O/l/s
